

EE5609 Assignment 1

Raghav Girgaonkar

Abstract—This document contains the solution to find Which gives us the angle between two lines.

$$\cos \theta = \frac{8}{5\sqrt{3}} \quad (2.0.7)$$

$$\Rightarrow \theta = \arccos \frac{8}{5\sqrt{3}} \quad (2.0.8)$$

$$\Rightarrow \theta = 22.517^\circ \quad (2.0.9)$$

1 PROBLEM

Find the angle between the pair of lines

$$\frac{x+3}{3} = \frac{y-1}{5} = \frac{z+3}{4}$$

$$\frac{x+1}{1} = \frac{y-4}{1} = \frac{z-5}{2}$$

2 SOLUTION

Using the definition of a line in co-ordinate geometry, we see from the above two equations, the direction vectors **a** and **b** of the two lines are

$$\mathbf{a} = \begin{pmatrix} 3 \\ 5 \\ 4 \end{pmatrix} \quad (2.0.1)$$

$$\mathbf{b} = \begin{pmatrix} 1 \\ 1 \\ 2 \end{pmatrix} \quad (2.0.2)$$

respectively. In order to find the angle between the two direction vectors, we use the definition of dot product,

$$\cos \theta = \frac{\mathbf{a}^T \mathbf{b}}{\|\mathbf{a}\| \|\mathbf{b}\|} \quad (2.0.3)$$

Which gives us,

$$\mathbf{a}^T \mathbf{b} = 16 \quad (2.0.4)$$

$$\|\mathbf{a}\| = \sqrt{50} \quad (2.0.5)$$

$$\|\mathbf{b}\| = \sqrt{6} \quad (2.0.6)$$
